Dear Acting Field Director Erik Bonnar and Warden Nathan Allen:

We are writing to urge you to immediately develop evidence-based and proactive plans for the prevention and management of COVID-19 at the Mesa Verde Detention Center. We understand based on your March 10, 2020 statement that ICE is tracking the outbreak and that some detainees have met the criteria for testing.¹ We would like to meet with you within the next two weeks to discuss how you are protecting the health of the people in your custody and the people who work in the detention center.

People in detention are highly vulnerable to outbreaks of contagious illnesses. They are housed in close quarters and are often in poor health. Just last summer, Mesa Verde quarantined an entire unit, of about 100 individuals, because of a chickenpox outbreak.² Without the active engagement of the detention center's administration, they have little ability to inform themselves about preventive measures, or to take such measures if they do manage to learn of them. We are particularly concerned about the health and safety of the people detained at Mesa Verde, given the facility's demonstrated failure to provide adequate medical care in the past.³ Protecting the

³ See, e.g., Andrea Castillo, "ICE provides 'deplorable' healthcare to detained immigrants, advocates allege in massive lawsuit," LA Times (Aug. 19, 2019) available at <https://www.latimes.com/california/story/2019-08-19/immigrant-detention-medical-care-lawsuit>; Maya Srikrishnan, "Lawsuit Alleges Poor Medical Care at ICE Facilities" Voices of San Diego (Aug. 19, 2019) available at <https://www.voiceofsandiego.org/topics/government/lawsuit-alleges-poor-medical-care-at-ice-facilities/>; Sam Morgen, "Deficiencies and poor oversight at Bakersfield ICE detention center cited in two state reports,"

health of people in detention is also a necessary step to protecting the public safety of the broader community, as detention center staff and ICE officers go back to their homes each night.

In the past few years, we have received complaints from people detained at Mesa Verde alleging shortages of cleaning and personal hygiene supplies, including for example: bleach and other disinfectant products, shampoo, and soap. Several people detained at Mesa Verde have reported that to obtain personal hygiene products they must purchase them from the commissary at a high cost—thus, preventing many individuals from accessing these basic necessities. These deficiencies leave detainees at Mesa Verde at increased risk of contracting communicable diseases.

We ask that you immediately reach out to the Kern County Department of Public Health (DPH) to develop plans to address the virus in the detention center. Having an appropriate, evidence-based plan in place can help prevent an outbreak and minimize its impact if one does occur. Not having one may cost lives.

While the plan should be developed collaboratively by ICE, GEO and the Kern County DPH, some of the critical issues that should be addressed are:

- **Education of the people in your custody:** People housed in the detention center need to be informed about the virus and the measures they can take to minimize their risk of contracting or spreading the virus. They should be educated on the importance of proper handwashing, coughing into their elbows, and social distancing to the extent they can. Information about the spread of the virus, the risks associated with it, and prevention and treatment measures should be based on the best available science.
- **Education of the staff:** Correctional, administrative, and medical staff all should be educated about the virus to protect themselves and their families, as well as the people in their custody.
- **Staffing plans:** Regardless of how many staff stay home because they are sick, the detention center will have to continue functioning. There should be a plan for how necessary functions and services will continue if large numbers of staff are out with the virus.
- **Staffing plans for services provided by detainees:** Many tasks in detention facilities, such as food preparation and basic sanitation, are performed by detainees. The plans for an outbreak should also address how necessary tasks performed by detainees will continue if large numbers of detainees are ill.
- **Provision of hygiene supplies:** The most basic aspect of infection control is hygiene. There should be ready access to warm water and adequate hygiene supplies, both for handwashing and for cleaning.
- **Screening and testing of staff and the people in your custody:** The plan should provide for all staff and people in custody to be monitored daily and tested at the onset of any symptoms of cough, fever, and/or shortness of breath.

- **Housing of persons exposed to the virus:** The plan should describe how and where people in the detention center will be housed if they are exposed to the virus, are at high risk of serious illness if they become infected, or become sick with it. *This should not result in prolonged, widespread lock-downs.* Any lock-downs or interruptions in regular activities, such as exercise or visits and phone calls with families or attorneys, should be based solely on the best science available and should be as limited as possible in scope and duration. Information about lock-downs, including how long units will be locked down and what restrictions are imposed on them, should be posted publicly for visitors' and attorneys' awareness. Should it become medically necessary to isolate inmates, isolation should not be seen as punitive, and anyone in isolation should be ensured ample access to comfort and entertainment. Fear of being placed in lock-downs or isolation could delay inmates notifying medical staff if they experience symptoms of infection.
- **Treatment:** Courses of treatment should be evidence-based, available immediately, and in compliance with scientifically-based public health protocols.
- **Vulnerable populations:** The plan should provide for additional precautions for those who are at high risk of serious illness if they are infected, such as pregnant women and people with chronic illnesses, compromised immune systems, or disabilities, and people whose housing placements restrict their access to medical care and limit the staff's ability to observe them.
- **Releasing detainees:** ICE should mitigate the risk of an outbreak at the Mesa Verde Detention Center by reducing the population through release on bond or parole. ICE should also exercise discretion to halt or reduce the number of people who are newly detained. At the very least, ICE should release from custody people who are from highly vulnerable populations, people at increased risk of the disease, and anyone suspected or showing symptoms of COVID-19—taking care to ensure they can receive adequate medical care outside the detention center.
- **Data collection:** The collection of data regarding COVID-19 will be part of the public health response. As with any contagious disease, data collection is critical to understanding and fighting the virus. The detention system should be part of this process. The same information that is tracked in the community should be tracked in the detention facilities.

Please let us know via written response by Friday, March 13, 2020 when you will be available to discuss your plans with us.

Sincerely,

Stephanie Padilla
